

# Self-Care Campaign

## Introduction

As part of our recovery plan, it has been agreed by governing body to start a self-care campaign from 26<sup>th</sup> June 17 to help reduce the prescribing of medicines used to treat common minor ailments.

The campaign is aimed encouraging anyone living or working in Calderdale to purchase medicines which are readily available over the counter and less expensive if they are purchased without a prescription. However, a clinician can still prescribe these items where they feel it is appropriate.

The success of this campaign will depend upon the commitment of the prescribers to ensure that the self-care messages are promoted. In addition the communications team will be raising public awareness of the need for wider self-care and the importance of following the self-care approach as the first line when managing a minor condition.

## Campaign aims

The NHS belongs to everybody and the CCG must ensure that its resources are used in the best possible way for all patients. By delivering the campaign we hope to achieve the following objectives:

- Encourage Patients to look after themselves and their children where possible and manage self-limiting minor ailments with support from their local pharmacy if needed.
- Encourage Patients keep a small supply of common medicines in their own medicine cabinet so they are able to manage minor ailments at home.
- Promote that painkillers are widely available from pharmacies and supermarkets. Some of these medicines, such as paracetamol, are approximately four times more expensive when it is prescribed on the NHS compared to when it is purchased in pharmacies or supermarkets.
- Inform patients who receive medication on a regular basis that any medicines they do not need or use should not be collected on prescription. Getting medication on prescription that is not used is a huge cost to the NHS and can result in waste.

It is important to note that whilst we want to encourage people to use NHS services responsibly the campaign does not include medicines prescribed for people with a long-term condition who routinely take high doses of these medicines to relieve pain and other symptoms. These patients will still receive the medication they require to manage their condition.

## Treatments for minor ailments

Many minor ailments are usually self-limiting and not of a serious nature, advice and medicines to alleviate symptoms products can be sourced from a Community Pharmacy or supermarkets.

See appendix 1 for examples of common minor ailments, available treatments and some exceptions to patients being able to purchase OTC (over to counter).

**Please note this is not an exhaustive list**
